

# COVID-19 Impact and Recovery Report: Domestic Travel

Updated: October 27, 2020

In response to COVID-19, Destination Canada has established a framework and analytical approach to identify signals from consumer and industry behaviour to understand when, where and at what pace travel and tourism will resume.

Destination Canada collaborated with partners in destination marketing, media, technology and travel to identify these indicators and signals. The framework has identified multiple phases of recovery, which aligns with user sentiment and intent to travel. For smaller provinces and territories, it is cautioned that lower availability of data can impact the reliability of signals. Given these limitations, Destination Canada has provided an assessment for all provinces and territories to the best of its ability. The summary of the methodology and terms can be found in Methodological Notes.

As a complement to this document, Destination Canada also provides updates to travel related measures that are currently in place for each province and territory, please reference the *Travel Related Measures* document:

<https://www.destinationcanada.com/en/coronavirus-updates/covid-19-research#canadianresidentsentiment>

## Summary of current phase for each province and territory:

Destination Canada assesses that Manitoba and Ontario have reverted to the Hyper Local phase and New Brunswick has reverted to the Intra-provincial phase.

	Travel Search Index	Accommodation Searches on OTA	Rate of Hotel Booking	Rate of Air Travel	New COVID Cases	Dining Search Index	Activities Search Index	Overall Assessment	14-day self-isolation required for residents returning from out-of-province for domestic leisure travel?	14-day self-isolation required for residents returning from international travel? <sup>9</sup>

## METHODOLOGICAL NOTES

**I. Recovery Signals:** The Recovery Measures are listed in their order of importance in understanding travel behaviour, with the primary measures in black and supporting measures in dark gray. A brief description of each measure is provided below.

Destination Canada has developed a framework to understand the phases of recovery of the travel market. These phases are:

- I. **COVID-19 Response:** Governments are responding with measures such as shelter in place and quarantines. Movement is restricted and travel is either not possible, desirable or encouraged.
- II. **Hyper Local Travel:** Some restrictions have been lifted and movement within local areas is possible. Governments will likely recommend that places ensure physical distancing while supporting local economies. Some travel may be taking place, such as day trips or overnight with friends and family.
- III. **Intra-Provincial or Intra-Territorial Travel:** Residents are booking trips within their province or territory. Travel by vehicle within a province/territory is possible and not discouraged.
- IV. **Inter-Provincial Travel:** Residents are booking trips in other provinces or territories. Travel by multiple means (air, car, trains, etc.) within the country, across provincial/territorial boundaries.
- V. **Tentative International Travel:** Some international travel, such as family related or urgent business. There may be some leisure travel from less risk averse travellers seek to capitalize on reduced prices or increases availability. Airlines may not have restored international routes beyond major hubs.
- VI. **Regularized International Travel:** Regular international travel. Some business meetings and events are re-introduced, leisure travel is closer to pre-COVID-19 levels.

A filled-in dot signifies that Destination Canada assesses we are in that phase of travel. An empty dot means we have not yet reached that indicator, and the crossed off box would signify that the measure does not apply for that phase of recovery. Some measures are currently being developed and will be updated as further progress is made.

## II. Description of the Measures

- **Travel Intent Search Index:** Google search engine queries for travel-related keywords in 2020 compared to 2019 searches, broken down by week (i.e. week of April 19, 2020 vs week of April 19, 2019). Available for each market's intra-provincial/territorial, inter-provincial/territorial and international travel search terms.
- **Rate of Accommodation Searches:** Weekly searches in 2020 for accommodation on a major online travel agency (OTA) against a rate of 2019 weekly searches, broken down by week. Available for each market's intra-provincial/territorial and inter-provincial/territorial accommodation searches. This is provided as a rate rather than a volume of searches.
- **Rate of Accommodation Bookings:** Accommodation bookings in 2020 on a major OTA against a rate of 2019 bookings, broken down by week. Available for each market's intra-provincial/territorial and inter-provincial/territorial accommodation bookings. This is provided as a rate rather than a volume of bookings.
- **Rate of Air Travel:** The volume of air bookings to other provinces/territories versus 2019 air bookings, broken down by week, as provided by IATA.
- **Weekly New COVID-19 Confirmed Cases:** The weekly total of new confirmed COVID-19 cases, as provided by the Government of Canada Health Infobase. Number of cases in the market and within other regions of Canada will likely be a determining factor for both governments allowing phased return of travel, as well as consumer confidence in traveling to a market.
- **Dining Search Index:** 2020 searches for dining related keywords compared to 2019 searches, broken down by week. Available for each market's intra-provincial/territorial, inter-provincial/territorial and international dining related search terms. This is provided as an index rather than a volume of searches.
- **Attractions & Events Search Index:** 2020 searches for attractions and events related keywords compared to 2019 searches, broken down by week. Available for each market's intra-provincial/territorial, inter-provincial/territorial and international attractions and events related search terms. This is provided as an index rather than a volume of searches.
